FAMIX Postmix dosing and filling system

Easy filling. Precise dosing.

QUALITY MADE IN GERMANY
Special machines for your production

The FAMIX Postmix dosing and filling system enables easy and precise filling of postmix containers. Thanks to the flexible filling hose, containers can be filled individually or directly on the pallet.To do this, the filling valve attached to the hose is simply inserted into the opening in the lid of the respective container.

With a filling capacity of up to 100 containers per hour, the system enables efficient postmix filling.

Technical features

- Precise volume dosing
- High filling capacity
- Flexible handling
- Automatic dosing process

Operating principle:

1

The desired filling volume is set on the preset counter. Once the filling process starts, a flow meter measures the dispensed volume and transmits the corresponding pulses to the preset counter.

2

Shortly before the preset filling volume is reached, the pressure-controlled valve automatically switches to the throttled position. Once the desired volume is reached, the valve closes.

3

The preset counter then automatically resets to the preset value. The next container can be filled.

FAMIX postmix dosing and filling system

For hygienic production

The FAMIX postmix dosing and filling system is designed for CIP and hot cleaning, allowing seamless integration into existing cleaning processes.

Our new ticket system for support requests

Our new ticket system for support requests is now available – especially for urgent matters such as machine downtime or technical malfunctions.

Your request will be recorded in a structured format and forwarded directly to the appropriate specialist team. This allows us to process requests more quickly, ensure transparent workflows, and reduce response times.
