FAMIX 8,000 TurboDigi with intelligent syrup tank control

Developed together. Successfully implemented.

In collaboration with m+f KEG-Technik GmbH & Co. KG, we built the FAMIX 8,000 TurboDigi for Sources Alma, a French manufacturer of still water and lemonades.

Delivered in February 2026, **the system features advanced capabilities, including intelligent syrup tank control**, enabling flexible and automated production processes.

Your benefits at a glance:

- + **Automated production processes** – the intelligent syrup tank control system reliably determines which tank is being used for production, filling or cleaning.
- + **High process reliability** – the control cabinet and external tank control system with swivel arc position sensing ensure safe and precise system control.
- + **Consistent beverage quality** – integrated Brix and CO₂ measurement ensure precise recipes and reproducible production results.
- + **Fast and error-free production** – the lemonade is mixed directly on the filling line, aided by a state-of-the-art two-stage plate heat exchanger.
- + **Seamless system integration** – Profinet communication using the TCP/IP protocol enables reliable signal exchange for production and CIP.
- + **Efficient service and support** – Remote monitoring and maintenance via an Ethernet gateway and secure VPN access reduce response times and downtime.

Our new ticket system for support requests

Our new ticket system for support requests is now available – especially for urgent matters such as machine downtime or technical malfunctions.

Your request will be recorded in a structured format and forwarded directly to the appropriate specialist team. This allows us to process requests more quickly, ensure transparent workflows, and reduce response times.
